

INDUSTRIAL RESOLUTION | Winner:

A terrace perfect for stargazing and rooftop gardening is one of the distinguishing features of the winner in the "New Construction" category. Although small, this home and studio provide many amenities for contemporary living, including a garage and a second garden space.

"The treatment of materials is elegant and extraordinary," said the judges about the winner in the "New Construction" category, which recognized a project that created both a home and studio for two architects. The judges particularly liked the project's "interlocking spaces," the "consistent detailing" and the way the architects "handled the intersection of materials, particularly the wood and glass, and including the flooring." Washington architects who are no strangers to row houses, the judges also appreciated "the skillful execution of the front elevation" of this Pittsburgh row house.

The design's reflection of Pittsburgh's industrial heritage impressed the judges, and this was a primary goal of the architects, Gerard Damiani, Debbie Battistone and Edward Parker of studio d'ARC architects. In their design statement they said, "This small home and studio look toward the industrial origins of the site," adding that, "this live/work studio contains the needs of a modest studio space—living, dining, kitchen, bedroom, garage, basement and two gardens." One of the gardens, among the most dramatic elements of the home, is located on a roof terrace.

Architect: Gerard Damiani, principal-in-charge; Debbie Battistone, staff architect; Edward Parker, intern architect; of studio d'ARC architects, P.C.

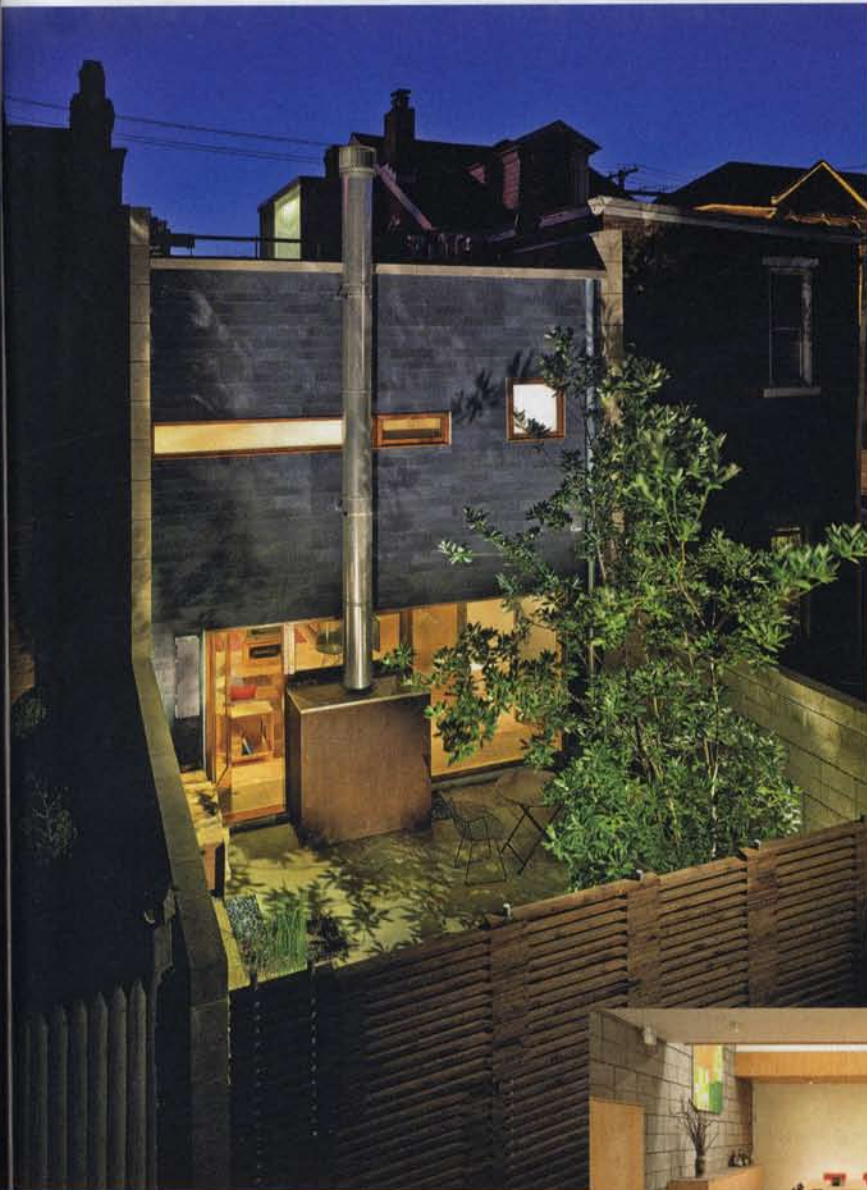

Windows: Custom maple and mahogany windows by Duratherm Windows. Pilkington glass wall by Southwest Aluminum. Skylight by O'Keefe's Inc.
